

Environmental Statement

Kuehne + Nagel is committed to offering environmentally sound, sustainable and innovative supply chain solutions that reduce our impact on the environment. Sustainability considerations play an integral part in the formulation of strategy, and in decision making.

To further this policy, Kuehne + Nagel has committed to:

Protect the environment by identifying and measuring its environmental impact, and striving to continually improve its environmental performance.

Have documented environmental objectives in place, based on its significant environmental aspects and compliance obligations, taking into account risks and opportunities.

Promote controls to address negative impacts using the following hierarchy:

- Reduce -- usage of energy and other resources.
- Reuse -- find opportunities to increase efficient use of resources.
- Recycle -- avoid landfill waste; use post-consumer sourced products, and those from sustainable sources where possible.
- Recover -- support methods that involve the conversion of waste into energy or compounds.

Support the use of energy-efficient technologies and services, and energy derived from renewable sources.

Encourage teamwork and participation in initiatives that improve environmental performance and awareness. This embraces employees, customers, subcontractors, industry workgroups and the community whenever there is a joint responsibility.

Promote suppliers able to offer sustainably sourced and energy-efficient alternatives.

Ensure compliance with all relevant environmental legislation and regulation, and other obligations.

Have emergency response plans in place to prevent and mitigate the environmental impact of accidental spills or releases.

Dr. Detlef Trefzger, CEO
